PROVISIONAL DRAFT OF CLAIM AMENDMENTS

1. (presently amended) A computer-assisted method of facilitating a <u>just-in-time</u> transfer of purchases to consumers, the method comprising:

on a computer system, for each of a plurality of consumers, associating a plurality of items ordered by the consumer from a plurality of merchants;

for each consumer, identifying a single geographic location from which the associated items will be transferred to the consumer and a time for the transfer;

on a computer system, for each of the plurality of merchants, estimating a transportation time for each of the plurality of items ordered by the consumer from the merchant to be transported to the location;

on a computer system, for each of the plurality of merchants, based at least on the estimated transportation time and the selected time for transfer, coordinating the shipping of each item from the point of origin to the location to ensure that all the associated items arrive at the location within a pre-specified time window preceding the selected time for transfer by a pre-specified time segment;

for each consumer, receiving the associated items at <u>the a single geographic</u> location:

for each consumer, based at least on the association of the items on the computer system, physically aggregating the items at the location; and

for each consumer, transferring the aggregated items to the consumer.

- 2. (previously amended) The method of Claim 1, wherein each of the purchased items is a product or comprises one or more products.
 - 3. (previously amended) The method of Claim 1, further comprising on the computer system, for each consumer, receiving notification of a pending delivery of at least one of the items to the location.
 - 4. (previously amended) The method of Claim 1, further comprising using the computer system, for each consumer, notifying the consumer that some or all of the plurality of items have been received at the location.
 - 5. (canceled)
- 6. (previously amended) The method of Claim 1, wherein transferring the aggregated items to the consumer comprises sending the items to the consumer from the location.
